DETAILED ACTION

This responds to Applicant's After final Amendment filed 04/08/2011. Claims 1, 4, 5, 7, and 11 have been amended. Claims 2, 9, 12, and 19 stand cancelled. Claims 1, 3-8, 10-11, 13-18 and 20 are now pending in this Application.

Response to Amendment

1. Applicant has submitted claim amendments and arguments which are herein entered into the record.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
3. Authorization for this examiner's amendment was given in a telephone interview with Mr. Michael A. Glenn on April 26, 2011. Since the call, Examiner points out that he further changed the word "comprising" to "constituting" in Claims 1 and 11 for clarity reasons and does not believe the claimed scope or claimed invention has been negatively impacted.
4. The application has been amended as follows:
 - a. Replace Claim 1 with the following:
 1. A video game controller hub, comprising:

means for receiving at least three control input sets from a corresponding number of video game controllers, each of said control input sets comprising a plurality of control inputs;

means for reducing said control input sets to one reduced control input set according to a reduction scheme;

said means for reducing said control input sets comprising a configuration interface for specifying said reduction scheme as a mapping of said control input sets received by said video game controller hub onto said one reduced control input set;

said interface operable by at least one user of said video game controller hub to indicate how said control input sets are to be combined to control one on-screen entity depicted on a display device;

said mapping comprising an averaging of each said plurality of control inputs constituting said control input sets onto said one reduced control input set; and

means for providing said one reduced control input set to a video game console;

wherein said one reduced control input set determines an action of said corresponding on-screen entity; and

wherein said number of video game controllers collectively control said corresponding on-screen entity.

b. Claims 3-7 are cancelled.

c. Replace Claim 8 with the following:

8. The video game controller hub of Claim 1, wherein said corresponding on-screen entity comprises any of: a vehicle; a character; and a team.

- d. Claim 10 is cancelled.
- e. Replace Claim 11 with the following:

11. A method for reducing at least three control input sets provided from a corresponding number of video game controllers to a video game controller hub, comprising:

receiving said control input sets from said video game controllers, each of said control input sets comprising a plurality of control inputs;

reducing said control input sets to one reduced control input set according to a reduction scheme;

said reducing said control input sets further comprising providing a configuration interface for specifying said reduction scheme as a mapping of said control input sets received by said video game controller hub onto said one reduced control input set;

at least one user of said video game controller hub operating said interface to indicate how said control input sets are to be combined to control said one on-screen entity depicted on a display device;

said mapping comprising averaging each said plurality of control inputs constituting said control input sets onto said one reduced control input set; and

providing said one reduced control input set to a video game console;

wherein said one reduced control input set determines an action of said corresponding on-screen entity; and

wherein said number of video game controllers collectively control said corresponding on-screen entity.

- f. Claims 13-17 are cancelled.
- g. Replace Claim 18 with the following:
18. The method of Claim 11, wherein said corresponding on-screen entity comprises any of: a vehicle; a character; and a team.
- h. Claim 20 is cancelled.

Allowable Subject Matter

- 5. Claims 1, 8, 11, and 18 are allowed.
- 6. The following is an examiner's statement of reasons for allowance: the prior art of record neither anticipates nor renders obvious Applicant's claimed invention, wherein, in combination with the other claimed limitations, wherein three or more control input sets from a corresponding number of video game controllers are reduced in a mapping reduction scheme of averaging onto one reduced control input set via a controller hub with an interface operable by a user to indicate how the control input sets are to be combined to control one on-screen entity depicted on a display. The closest art of record is the combination of Stiles in view of Tanaka wherein only two sets of controls are combined and wherein it would not have been obvious to extend the reduction scheme to three or more participants or to provide a user interface to specify a reduction scheme wherein the inputs are averaged.
- 7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
